MONTHLY REPORT

1 - 31 October 1960

Materiel Support Branch
Engineering Staff

I. PROJECTS AND ACTIVITIES:

2. A consolidated report listing major communications equipments in-use at Headquarters and throughout the world-wide communications network was prepared for OC-P. The report also included on-hand balances of the equipments in Headquarters' Strategic Reserves Stock. The information will serve as an aid to OC-P in planning budgets and equipment modernization.

3. A report listing quantities of major equipments issued from Headquarters' stocks during the past two years was prepared for OC-P. The report gives a breakdown of issues to [] OC, and non-OC activities. Of particular note is the fact that issues of 5LJ4 receivers to non-OC activities is more than double the issues to OC.

4. 5LJ4 receivers received recently from Collins appear to be of better quality than those received in August and September which set off the poor sensitivity problem.

5. The T & I Section expended about 120 man hours checking and repairing URT-11's and RT-1B's in warehouse stock to fill requirements for [] and AFCA. Headquarters' stocks have been depleted and NATCA has been requested to ship 10 each URT-11's from their stock to Headquarters in order to fill existing back orders.

6. Workload remained heavy in both the T & I Section and the Field Support Section as a result of [] requirements. A majority of these must be handled on a priority or crash basis. Approximately 80 man hours were expended by the Field Support Section primarily in support []

II. ADMINISTRATIVE:

1. [] returned from SEACA and is processing PCS for MECA.
